LETTER LIGHT INSTRUCTIONS

***DO NOT UNPLUG LETTER LIGHTS ONCE OUR TEAM HAVE SET UP

➔ Where lights could not be set up by our team, following the instructions below:

◆ Each light comes with a "Male" and "Female" cord at the back which connect directly to the transformer or in the case of multiple lights, into each other

◆ Take the LAST light in the set up order and locate the appropriate cable to join to the transformer (which plugs directly into power)

◆ There is an arrow on each cable THAT MUST BE LINED UP when connecting. If you connect the cables without the arrows pointing to each other, you will short the lights and they will not function. See photo below

HOW TO CONTROL YOUR LETTER LIGHTS (DOWNLOADING THE APP & CONNECTING)

➔ Search LED CHORD in the App Store (Android) or iTunes Store (Apple)

➔ Download, install app and open. Ensure Bluetooth is on

➔ At the top of the app screen is a list of the Bluetooth devices available in the area. The transformer model in the list you are looking for is "SP107E". Each transformer is numbered and then connected to a white module (either "A" or "B") resulting in the number you are looking for EG. "SP107E-4A". See photo below:

➔ Connect to the transformer by selecting the correct model and pressing the "on" switch next to it

➔ Ensure the colour code underneath is set to RGB TM1814 and that the total pixels are between 500 - 900

Enter

➔ Once you are connected, controlling the lights is simple. Press "Enter" and select the colour or theme you require (either solid or auto scrolling).

➔ When set to SOLID, you can select any standard colour for all of the lights

➔ When set to AUTO, you can select from over 180 themes and light sequences by sliding the scale at the top to the left or right. **NOTE THAT ONLY ONE PERSON SHOULD CONNECT TO THE LIGHTS AT ANY ONE TIME**
